5-20. (Cancelled)

21. (New) A moisture curable composition produced by blending:
100 parts by weight of a mixture (A) comprising:
(1) a copolymer having reactive silicon groups which can be cross-linked by hydrolysis,
whose molecular chain has:
(i) alkylacrylate and/or alkylmethacrylate monomeric units having an alkyl group with
1 to 8 carbon atoms; and
(ii) alkylacrylate and/or alkylmethacrylate monomeric units having an alkyl group
with 10 or more carbon atoms; and
(2) an oxyalkylene polymer including reactive silicon groups which can be cross-linked
by hydrolysis; and
2 parts by weight to 300 parts by weight of polymethyl methacrylate powder (B) having a
grain diameter ranging from 0.01 μ m to 300 μ m,
further comprising:
amorphous silica having a grain diameter ranging from 0.01 μ m to 300 μ m, wherein said
mixture (A) has a first refractive index, and a mixture of said polymethyl methacrylate
powder (B) and said amorphous silica has a second refractive index, and wherein a
difference of the first and second refractive indexes is 0.1 or less.

22. (New) The moisture curable composition according to claim 21, wherein said
mixture (A) includes at least one polymer including silyl groups.

23. (New) The moisture curable composition according to claim 22, wherein said
polymer is an acrylic polymer including silyl groups.
